DETAILED ACTION

Drawings

Figure 6 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-6, 8-18 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art (Fig 6) in combination with Sumikawa

Sumaikawa (Fig 6, 8) discloses an electrode structure of a carrier substrate ("mounting board"; 13) for solder-bonding a mounting structure to a main substrate, said electrode structure comprising: a carrier substrate (7) having a hemispherical or cylindrical shaped recess (shown in Fig 6) in a central area of a surface thereof; a hemispherical and cup shaped soldering land of the electrode structure arranged and fixedly attached (via recess being coated to form land), disposed in the recess that has a concentric hollow portion thereinside, said land having a in inherent circumferential wall defining an interior hollow portion extending from said surface, and a passage (2B) or through portion that goes through the outer portion of the wall and flanges (portion of

Application/Control Number: 09/847,370

Art Unit: 2827

1 protruding over board) connecting between an inside portion of said recess and an outer portion of said circumferential wall surface through an outer portion of said circumferential wall (not labeled); wherein the circumferential wall is entirely within the recess with at least one slit.

Sumikawa does not appear to disclose that the mounting structure is a semiconductor device, however applicant's admitted prior art (Fig 6) discloses a semiconductor device (501). It would have been obvious to one of ordinary skill in the art to incorporate a mounting semiconductor device structure on the carrier substrate ("mounting board") of Sumikawa in order to provide a mounting structure as required by Sumikawa (Title).

Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sumikawa and applicant's admitted prior art in combination with Lau (Chip Scale Package).

Neither Sumikawa nor Lau explicitly disclose that the modified package of the semiconductor device is of a Chip Scale Package type (CSP).

However Lau teaches the use of CSP.

It would have been obvious to one of ordinary skill in the art to form a mount package as a Chip Scale Package type (CSP), in order provide increase device density and easier burn in as taught by Lau (Preface).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Mitchell whose telephone number is (703) 305-0244. The examiner can normally be reached on M-F 10:30-8:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David L. Talbott can be reached on (703) 305-9883. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-3432 for regular communications and (703) 305-3230 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.
